Projects

- 1. Blood Donor Finder**
 - Developed an interactive web application that connects blood donors with patients in real-time.
 - Features search filters by location and blood group, secure donor registration, and instant notification capabilities to streamline critical blood donation requests during emergencies.
 - Used HTML, CSS, JavaScript and MySQL.
- 2. Fake News Detection Using AI**
 - Developed an AI-powered Fake News Detection system that analyzes news articles using Machine Learning and Natural Language Processing techniques to classify news as real or fake. The project focuses on improving information reliability by identifying misleading content with high accuracy.
 - Used Python, HTML, CSS.
